

Plastic seals

Technical features

Description

Plastic seals are replacement for lead seals. Until recently lead seals were almost solely used for sealing.

Nowadays more environmentally friendly plastics are generally used with environmental protection in mind, and additionally because of their very light weight compared to lead seals, plastic seals are much simpler for storage and the sealing process itself.

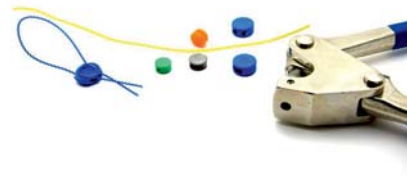

Sealing wire and sealing pliers are required for the use of the plastic seals.

Plastic seals are used for sealing of all types of meters, fire extinguishers, first aid boxes, exits in case of emergency, packing bags and for many other applications.
